

Vibo DJ Music Manager

Event Host Manual

Vibo is a music management and planning app.

It will accompany you in your event's music preparation process and will help your DJ nail your taste so you and your guests will have the most amazing time.

We imagine you have enough on your mind, so we kept it super-simple and easy to use. Heck, it's even fun.

Here's how it goes:

1.

Your DJ will text or email you a link to download Vibo from Google Play or the App Store.

Hey, your DJ sent you a link to download Vibo bnc.it/123

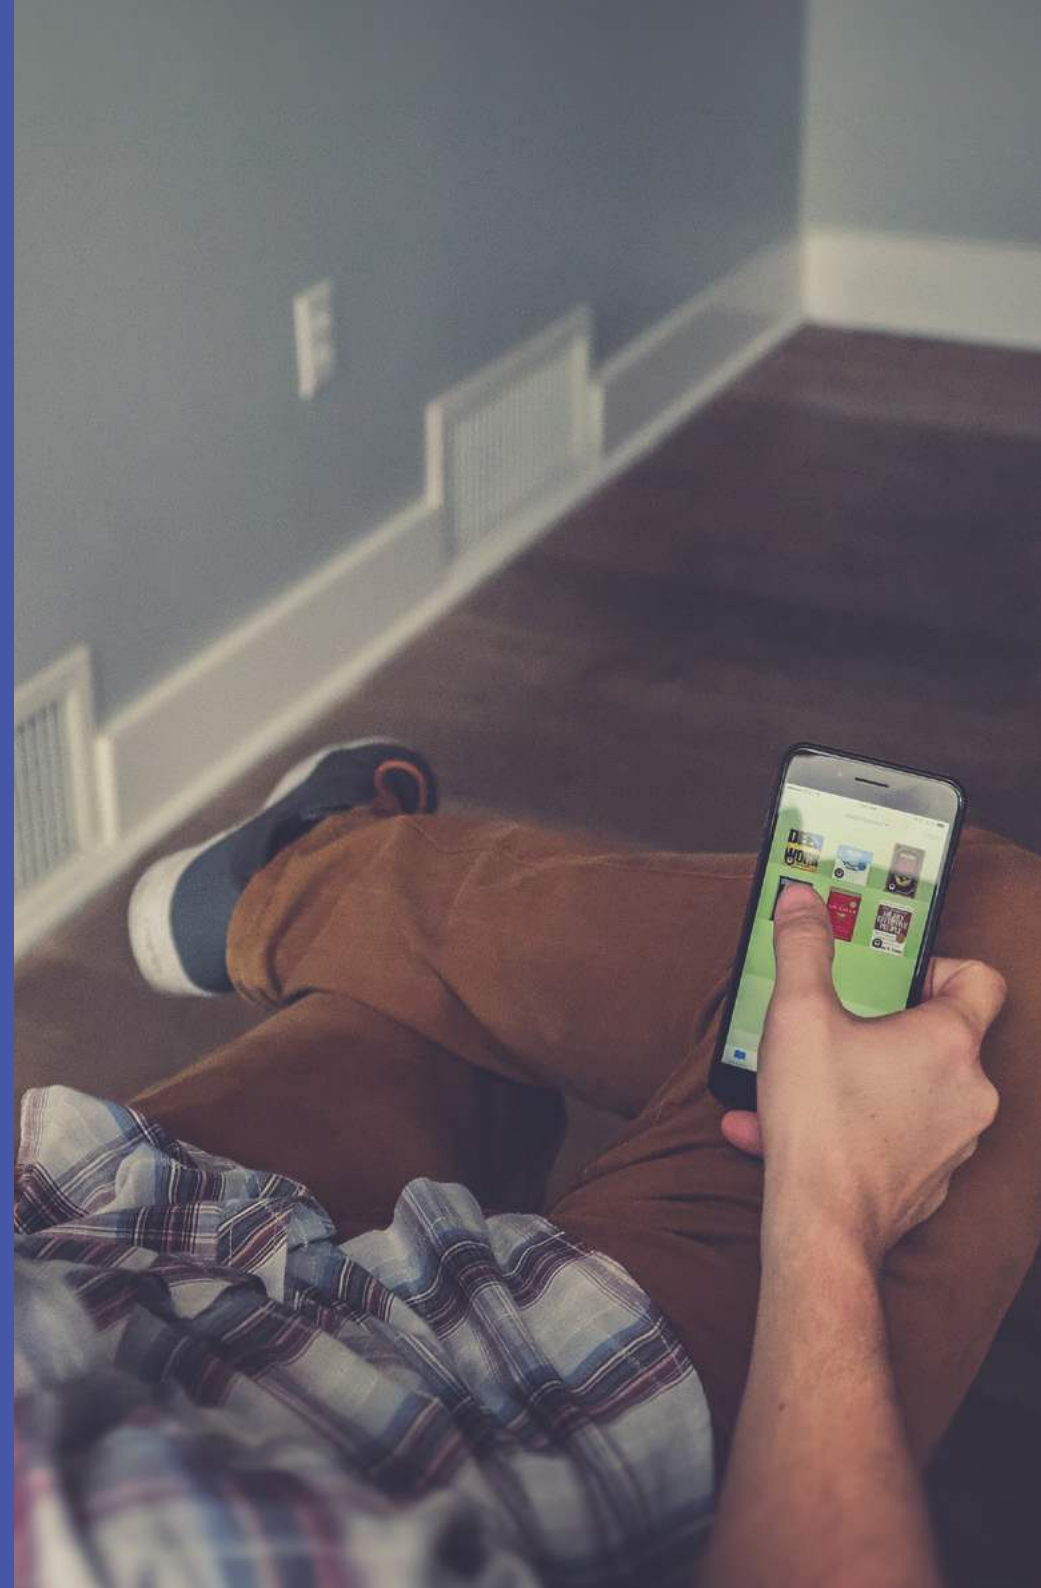

GET IT ON
Google Play

Download on the
App Store

2.

Install the app and sign up with your Email or Facebook account.

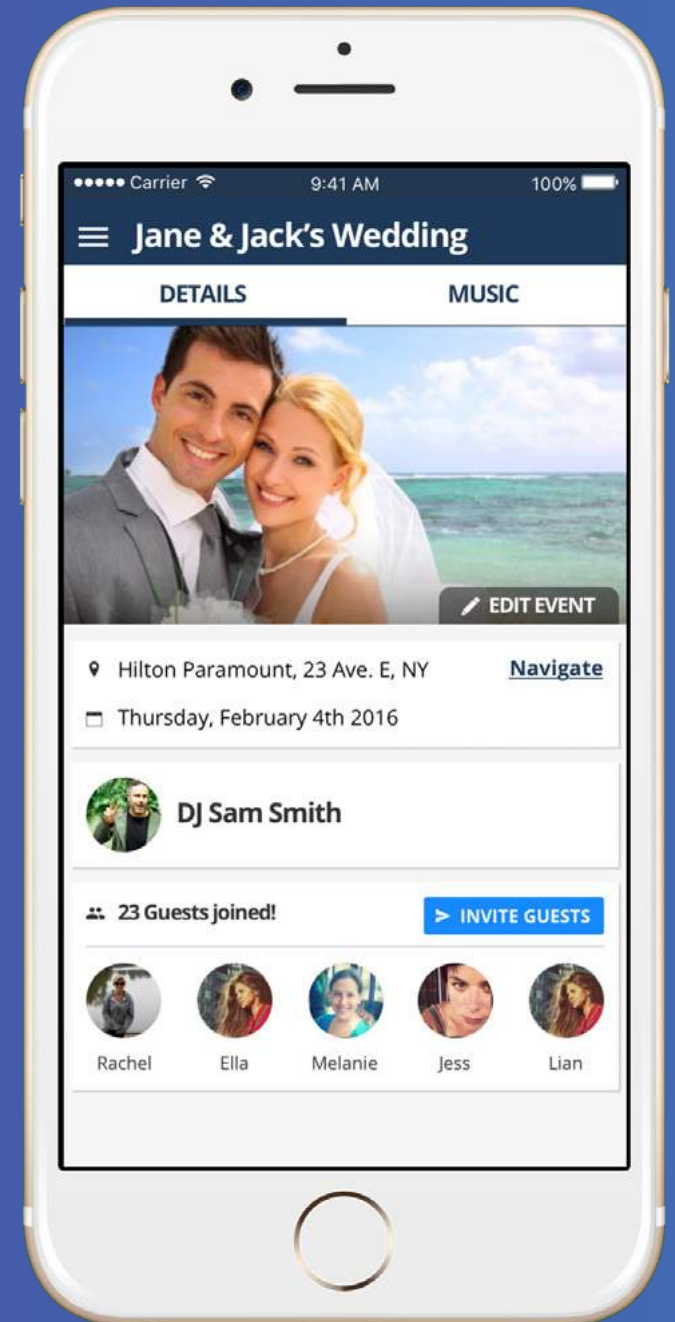

3.

After signing up you will be directed to your event's listing, which is visible only to you and your DJ, and has two tabs - Details and Music.

The Details tab allows you to change the cover photo, add more admins, invite guests to choose music and edit your event's details.

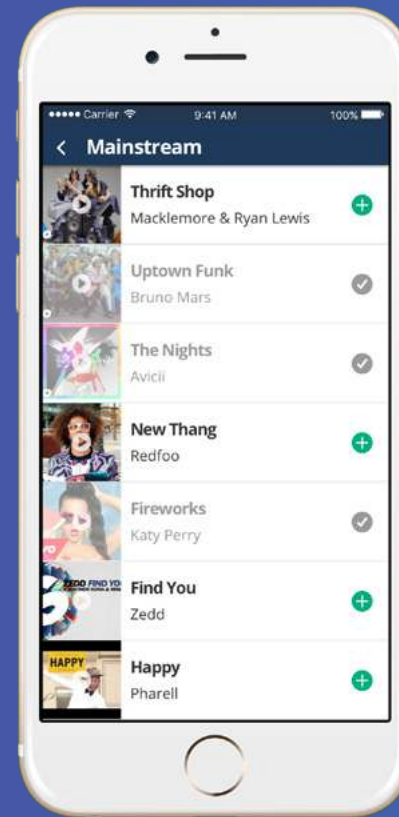

The Music tab allows you to add and manage the music requests for your DJ. The screen consists of different sections, such as Reception Songs, Party Songs, First Dance Song, etc.

4.

Add songs by tapping on a section and then tapping the green + button.

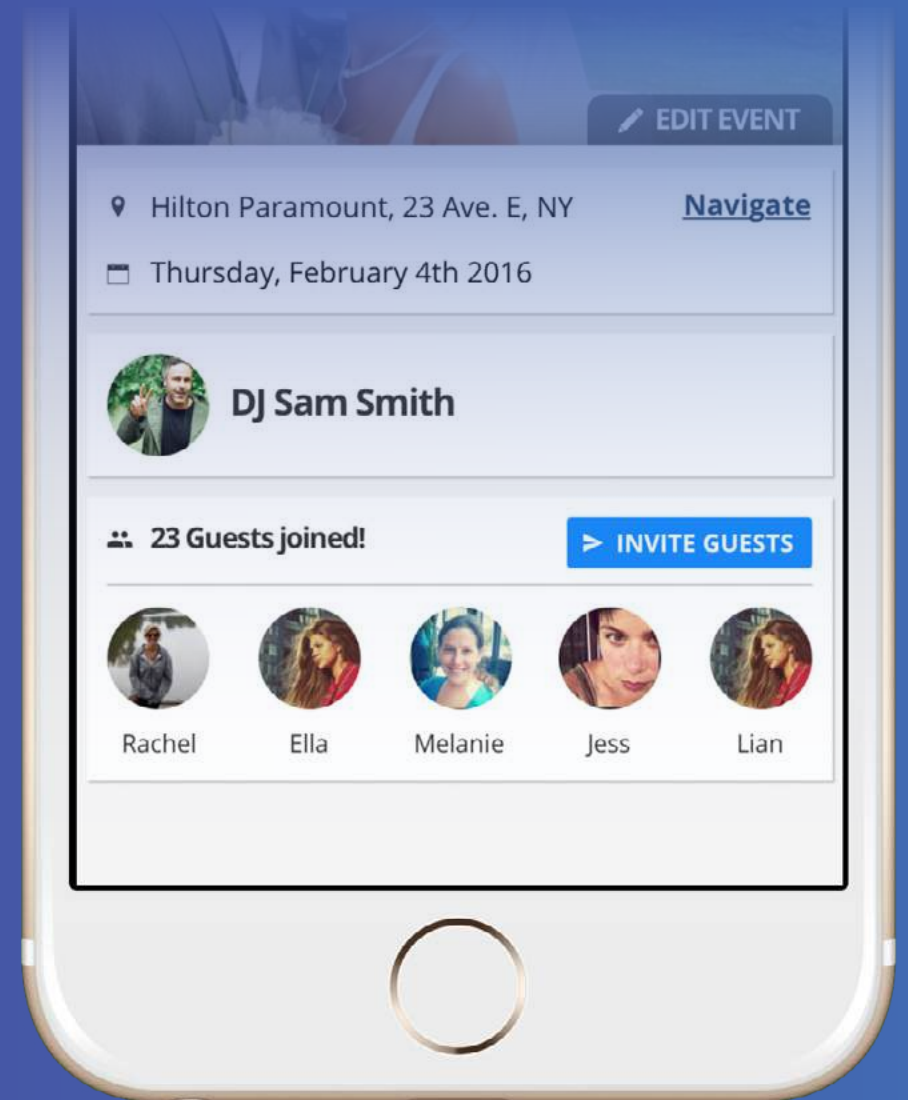

You can add songs either by searching Youtube from the top bar or by browsing Vibo's recommendations.

5.

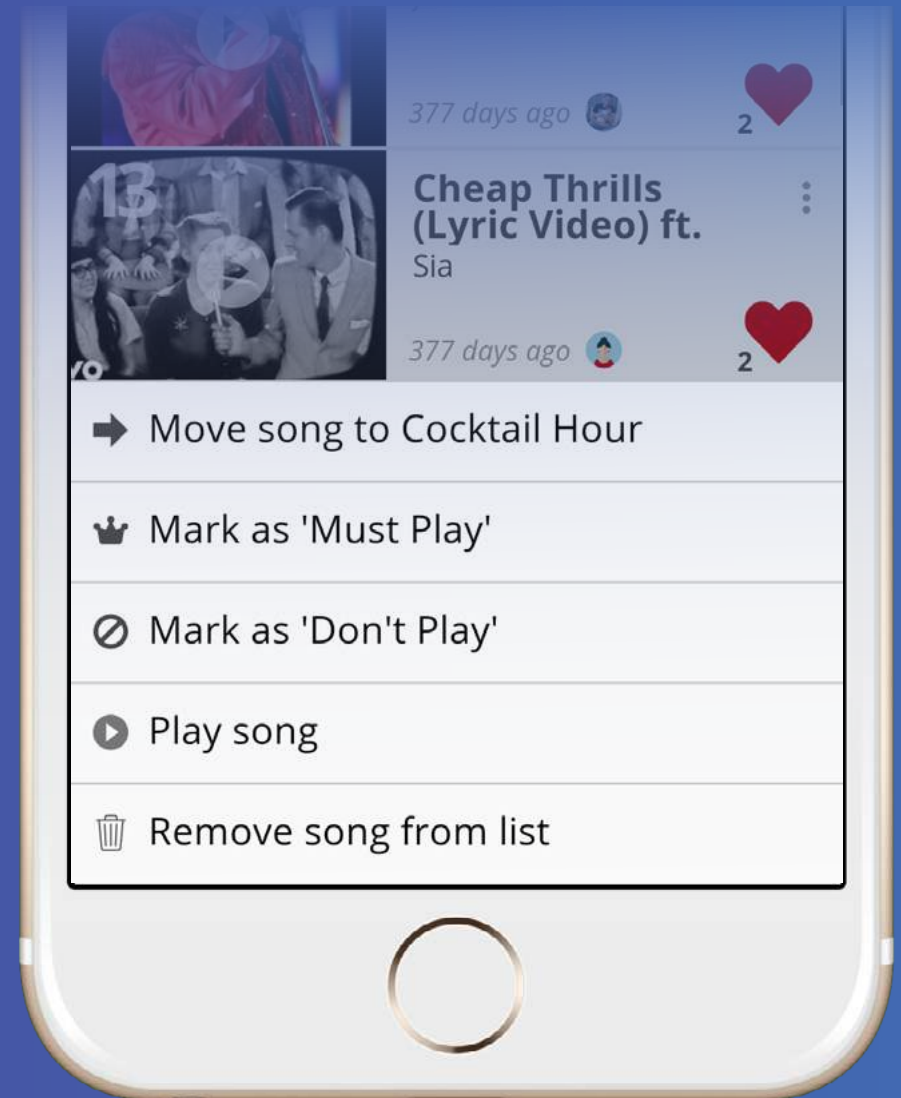

Invite guests to upvote and suggest songs of their own by tapping the blue button on the Details screen. Your event has a unique URL, making it a breeze to invite your guests via text, email, Facebook or any other messaging app you're using.

Note: guests can only add and upvote songs. They can not remove songs or see private sections such as First Dance Song, Cake Cutting Song etc.

6.

Finalize your song requests by marking them as “Must Play” or “Don’t Play”, or by removing them completely. Songs that remain in the list will be played if possible.

7.

Notify your DJ and put on your dancing shoes, **you're done.**
